

Para Illuminating Rocket - Technical Specifications

The Para Illuminating Rocket is designed for use in emergency search and rescue operations where a white light is needed. The rocket operates in the same way as the Para Red Rocket. When fired the payload is instantly projected to a height of 300m where a parachute suspended flare is ejected and burns for 30 seconds at 80,000 candlepower.

Technical Specifications

- **For night time use to illuminate an area**

- **Easy to operate**

- **Illuminates in suspension at 300m at 80 seconds**

- **Burn time 30 seconds**
